Task AI

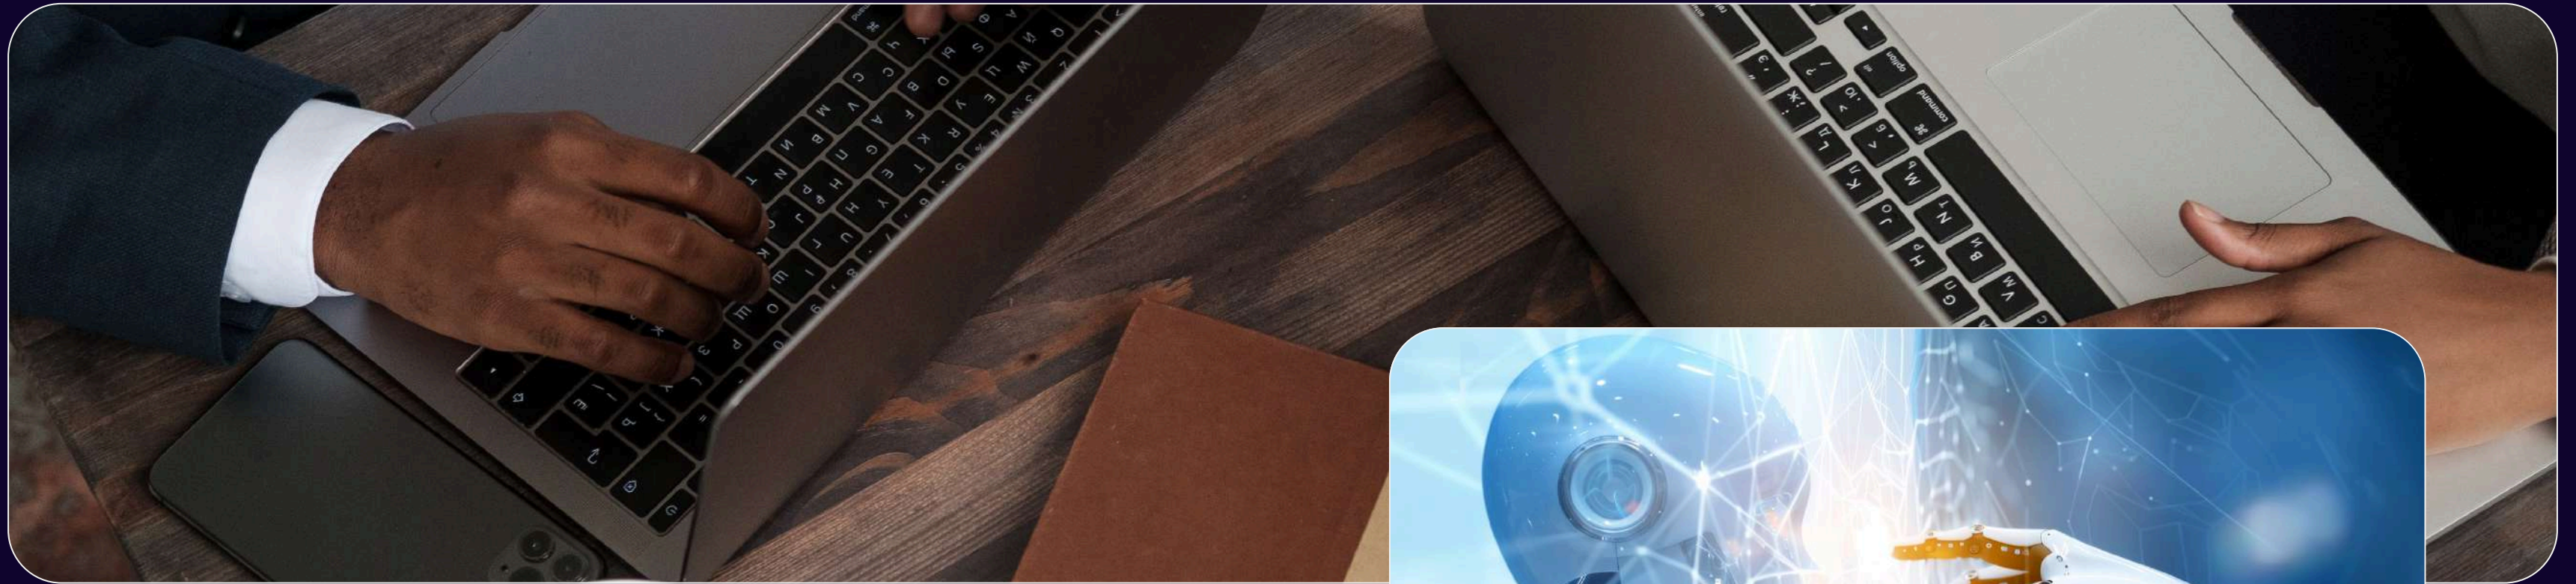

Idea Presentation

Introduction

Today I'll talk about how AI-powered reminders help people and what their downsides are.

Company Overview

My name is Adil Yesenzholov. I live in Kostanay. I'm 15 years old and in 9th grade. I take programming classes and work on AI projects.

Problem

Today, people have many things to do, and because of this, they often forget important tasks. Ordinary reminders are not always effective because they do not take into account a person's habits, schedule, and situation.

Our project solves this problem with the help of artificial intelligence: it analyzes the user's behavior, chooses a more suitable time for reminders, and helps organize everyday tasks more effectively.

Our Vision

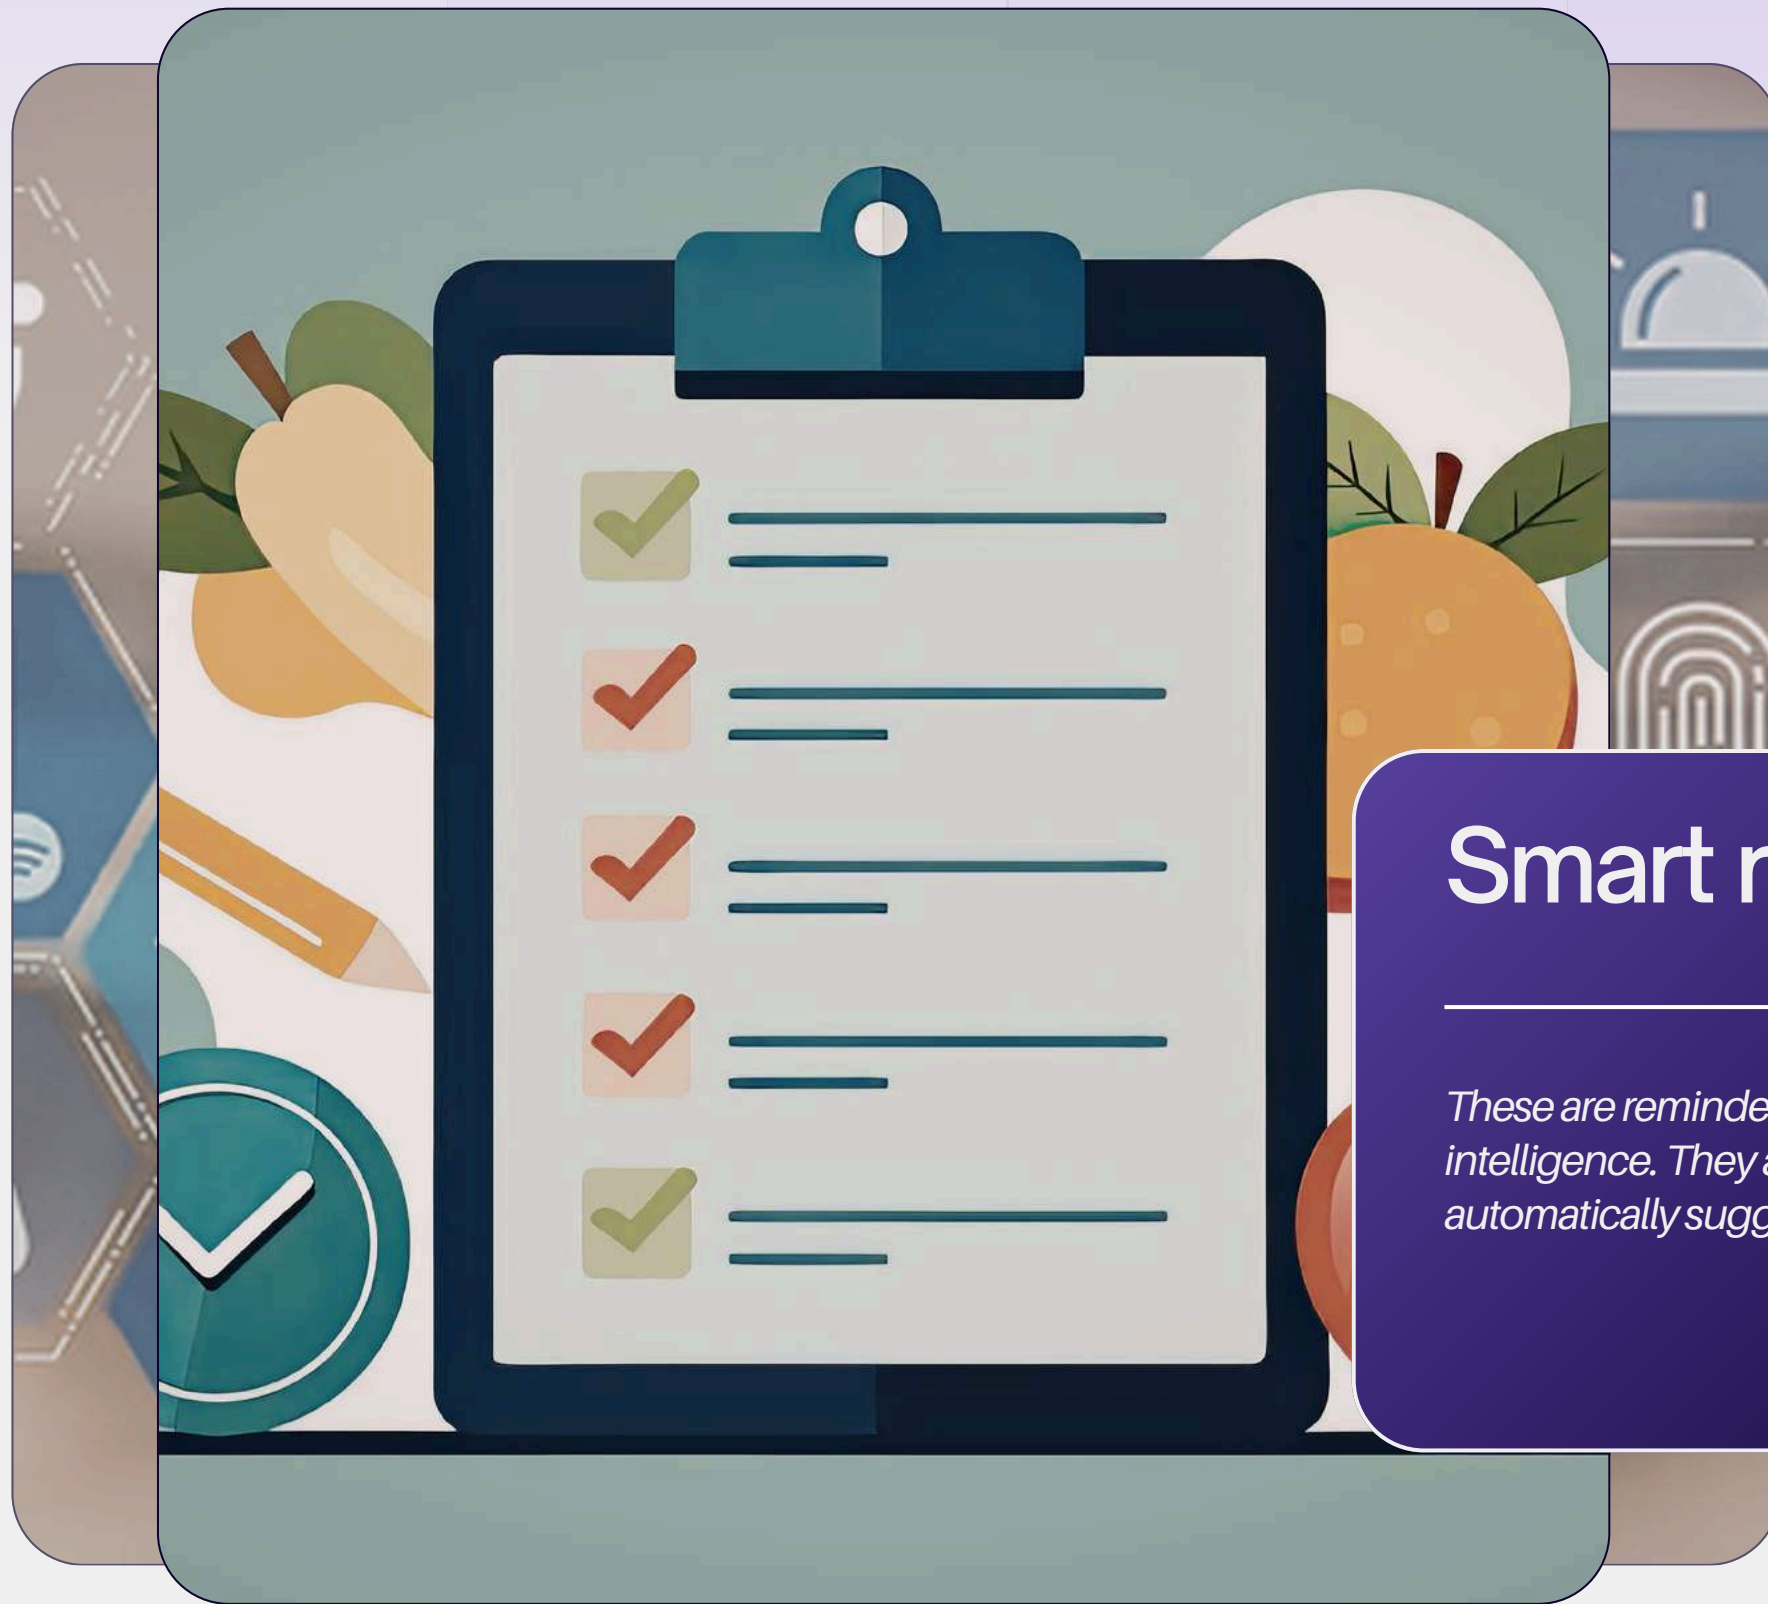

These are reminders that use artificial intelligence. They analyze human behavior and suggest what needs to be done.

Smart reminders

These are reminders that use artificial intelligence. They analyze human behavior and automatically suggest actions.

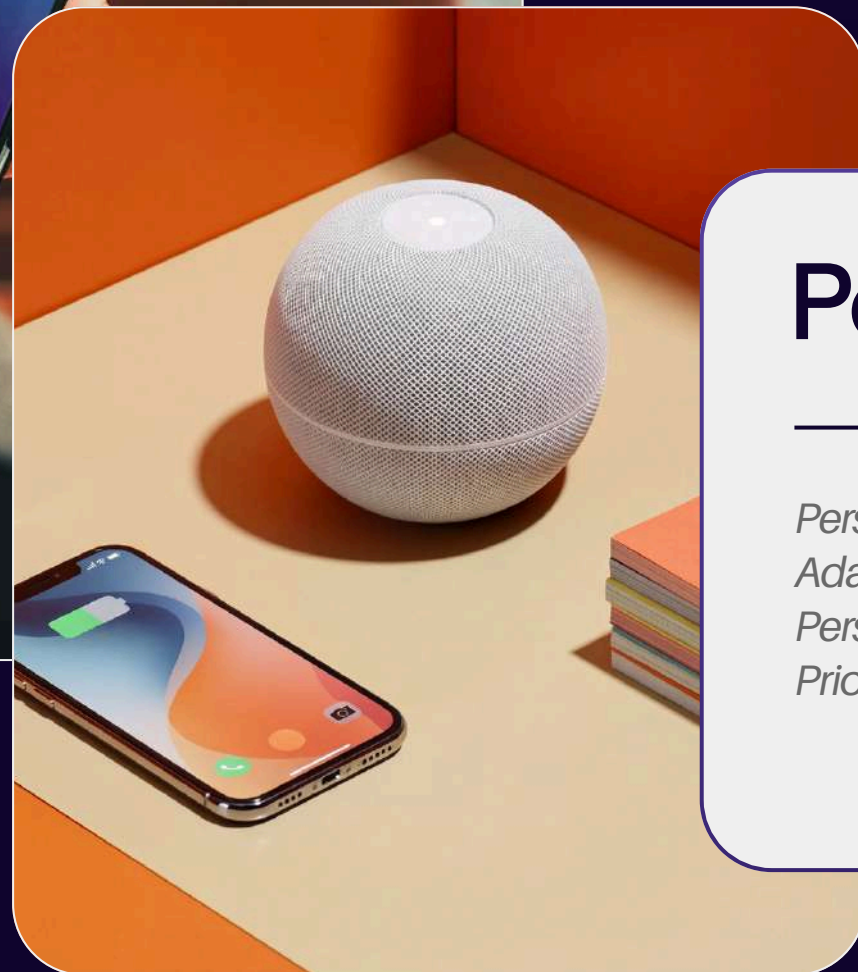

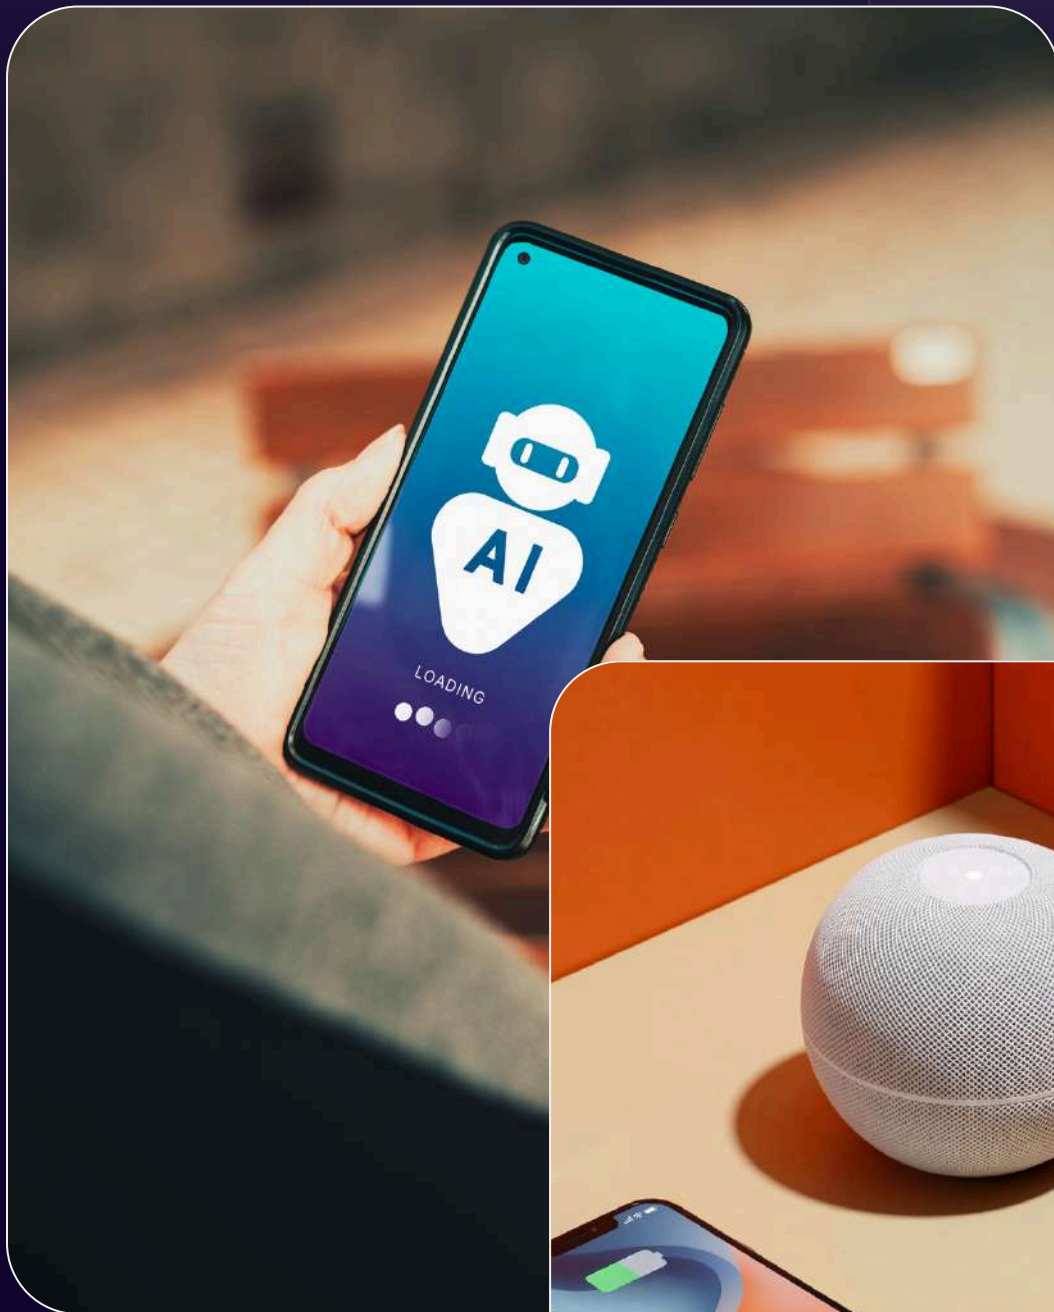

Habit analysis

AI adapts to the user, saves time, and reminds at the most opportune moment, for example, to leave early due to traffic jams.

Our Solutions

AI adapts to the user, saves time, and reminds at the most opportune moment, for example, to leave early due to traffic jams.

Personalization

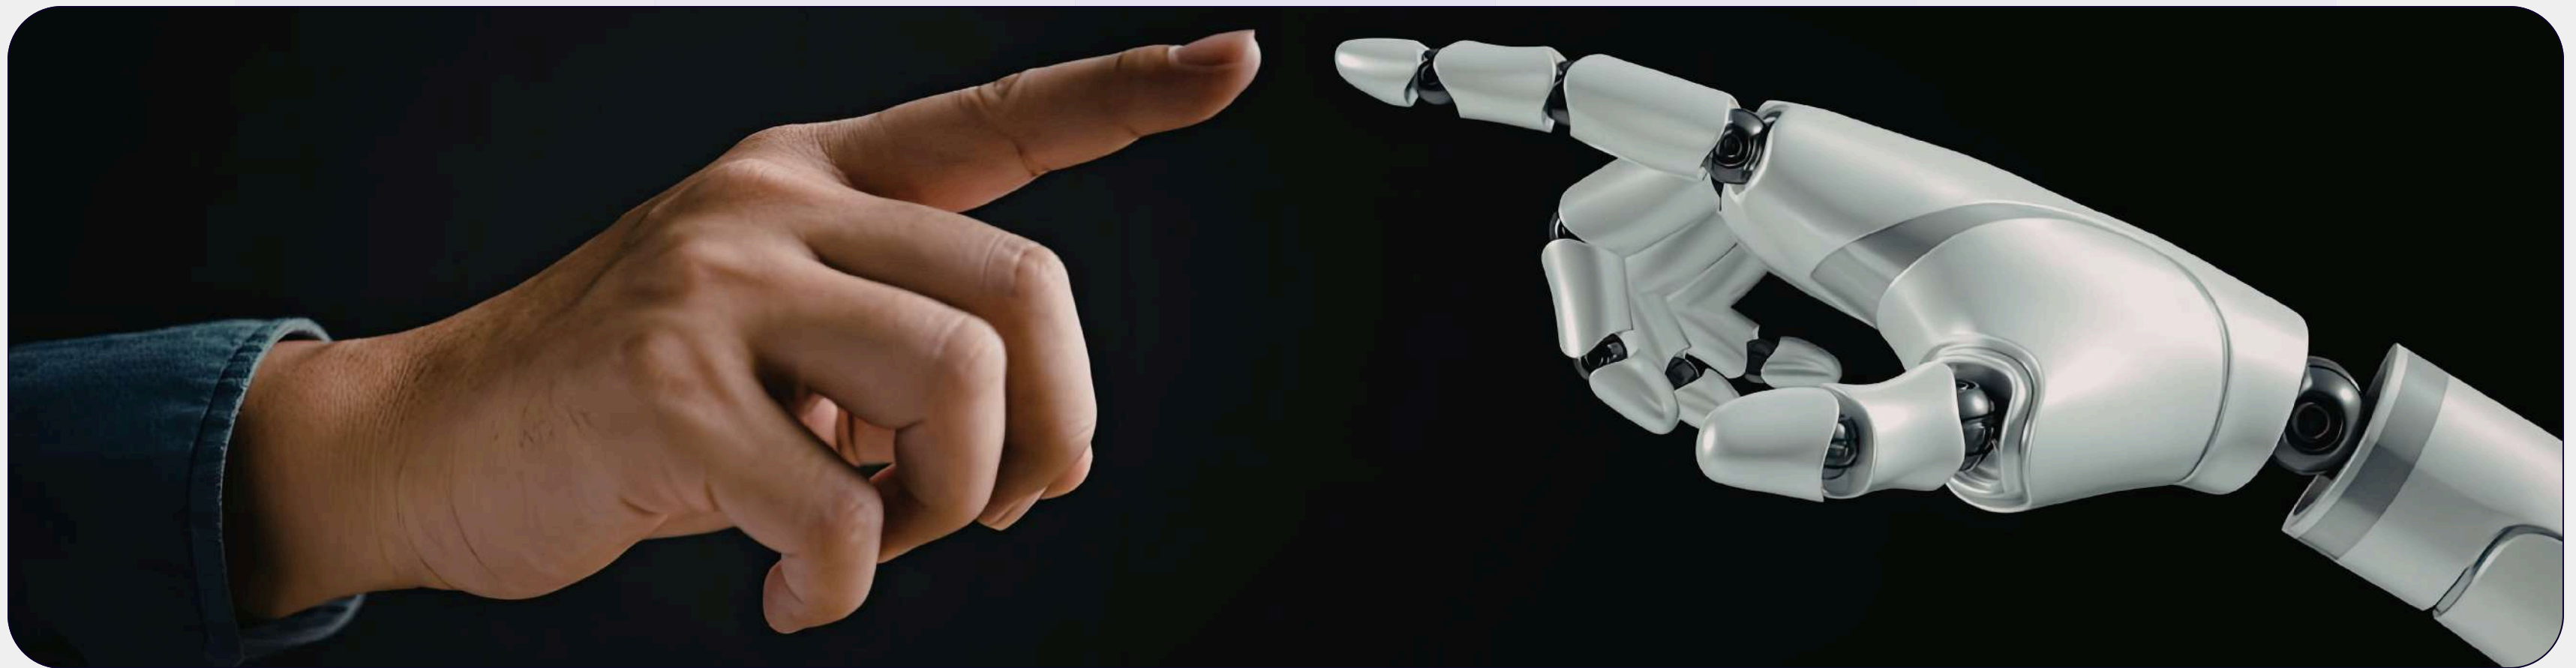

*Personalized task recommendations
Adaptation to your work style
Personalized reminders
Priority management*

Smart tips

*Task autocompletion
Task splitting into steps
Task AI suggests how long a task will take
Contextual tips*

30.03.2026

AI reminders make life more convenient, but it's important to use them wisely and not rely on them completely.
